

FlashCONNECT 3.3 Available NOW

January 2004

Raining Data Corporation (Nasdaq: RDTA), is pleased to announce the availability of FlashCONNECT 3.3.

FlashCONNECT is Raining Data's middleware product that allows you to take your existing Pick based applications to the Web. Once there, applications continue to execute feature-rich, time proven business rules developed using BASIC on the database server, while FlashCONNECT establishes the required links to the Web server.

FlashCONNECT conforms to HTML standards and works with any industry standard Web authoring tool to create the graphical look and feel of the application. Once the application is complete, it may be accessed from the Internet, intranet, or extranet by anyone using a standard browser.

What's New in FlashCONNECT 3.3?

In this latest Minor Release, FlashCONNECT 3.3 brings enhancements to the overall performance and functionality of the product and combines a collection of patches and product fixes reported to our technical support department. For further details, please view the [Documentation](#) on our Web site.
